12. Security and Governance in Zoho Creator

Gym Membership Enrollment & Front Desk Management

Aim:

To implement security features and governance / administration practices in Zoho Creator for the “Gym Membership Enrollment & Front Desk Management” application, by managing user roles, demo users, application permission profiles, portal user permissions, domain restrictions and activity monitoring.

Features Used Overview

Feature	Location in Zoho Creator	Purpose
User Management (Make as User)	Manage → Users	Review account users and remove admin privileges when no longer required
Demo Users	Deploy → Environments → Settings → Demo Users	Test the application using sample users with specific permissions and roles
Permission Profiles	App Settings → User Permissions	Define what internal staff (Front Desk, Trainer, Gym Manager) can access
Portal User Permissions	App Settings → Portal User Permissions	Control what gym members and corporate coordinators can see and do
Permission Set (Module Matrix)	Add Permission Set dialog	Set Access / View / Edit / Delete / More rights for each form
Field Permission	Set Permission → Field Permission	Restrict access to individual fields (e.g. member contact details)
User Domain Restriction	Manage → Operations → Domain	Allow only users from a verified email domain to access the application
Metrics	Manage → Metrics	Monitor user and portal user activity for auditing

Procedure:

1. **Open the Admin Dashboard.** Log in to Zoho Creator with the Super Admin account and open the **Manage** → **Users** page to view all users and their roles (Super Admin / Administrator).
2. **Remove unnecessary admin privileges.** Select an Administrator, choose **Make as User** and confirm the prompt so that the account loses its enhanced privileges (Figure 1).
3. **Create demo users for testing.** Go to **Deploy** → **Environments** → **Settings** → **Demo Users** and click **+ Add Demo User**. Choose the name, type (User / Portal User), permission and role (Figure 2).
4. **Assign a permission profile.** Open the **Permission** drop-down and select a profile such as Read, Write, Gym Manager, Front Desk Executive, Trainer, Membership Coordinator or Billing Administrator (Figure 3).
5. **Verify the demo users.** Click **Add** and confirm demouser_1 and demouser_2 are listed with the correct permission, role and type (Figure 4).

6. **Restrict the user domain.** Open **Manage** → **Operations** → **Domain**, select the gym application and choose a verified domain, then click **Enable**. Administrators are not affected (Figure 5).
7. **Monitor activity.** Open **Manage** → **Metrics** → **User activity** to review users accessed, idle users, stickiness and daily hits per user (Figure 6).
8. **Define user permission profiles.** In the application, open **Settings** → **User Permissions** → **Add Permission** and create profiles for Gym Manager, Front Desk Executive, Trainer, Membership Coordinator and Billing Administrator, each with a clear description (Figure 7).
9. **Define portal user permissions.** Open **Settings** → **Portal User Permissions** and create profiles for Corporate Coordinator, Guest Member and Member (Figure 8).
10. **Configure the permission set.** Click **Add Permission**. For each form (Membership Enrollment, Member Profile, Trainer Profile, Workout Slot Data, Payment Receipt and so on) tick Access and set View, Edit, Delete and More rights (Figure 9).
11. **Set advanced and field-level rights.** Use the **More** column to open Set Permission (Import, Export/Print, View all, Modify all, comments) and **Field Permission** to hide or lock sensitive fields. Click **Save** (Figure 10).
12. **Test the configuration.** Log in as each demo user and confirm that only the permitted forms, reports and fields are available.

Result:

Security and governance features were successfully implemented in the **Gym Membership Enrollment & Front Desk Management** application in Zoho Creator. User roles, demo users, permission profiles, portal user permissions, domain restriction and activity monitoring were configured, verified and documented.
