Experiment – 4 : Data Modelling and Form Design

Aim

To design and develop a **Gym Membership Enrollment Form** using **Zoho Creator** by creating a structured form, applying suitable validations, and generating a report for managing gym membership enrollments.

Theory

Data modelling and form design involve organizing information into suitable fields and sections for efficient data collection and management. In Zoho Creator, the thirteen Basic Field types available in the Form Builder can be used to collect and validate member information accurately.

In this experiment, a **Membership_Enrollment_Form** is designed to collect member details, contact and emergency information, membership plan and fitness preferences, and scheduling and health declaration. The form is divided into four sections: **Member Details, Contact Details, Membership & Fitness Preferences, and Scheduling & Health Declaration**.

Validation rules are applied to ensure accurate data entry, including mandatory fields, a valid email format, a country-code-enabled phone format, an age range restricted between 14 and 75, a Preferred Start Date restricted to disallow past dates (enforced through Deluge validation scripts), and a compulsory health declaration checkbox before submission. On successful submission, an automated confirmation email is sent to the member, and the submitted data is displayed in the **Membership_Enrollment_Report** for front-desk and trainer use.

Procedure

1 Open Zoho Creator and create the Gym Membership Enrollment & Front Desk Management application.

2 Create the Membership_Enrollment_Form.

3 Add the required fields for member, contact, emergency, membership, fitness, and scheduling details.

4 Organize the fields into the four specified sections.

5 Configure the required validations and mandatory fields, including Deluge scripts for age and date checks.

6 Set up an automated email confirmation to be sent to the member on successful form submission.

7 Save and preview the form, then enter sample member details and submit the form.

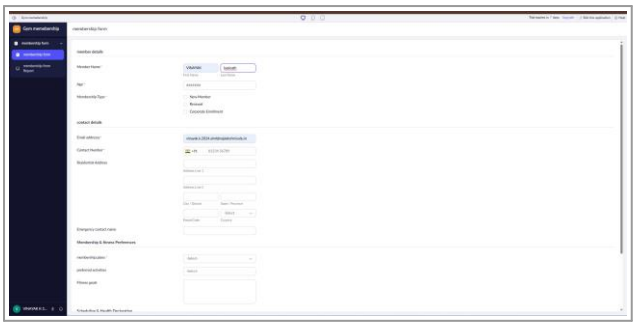

8 Create the Membership_Enrollment_Report and verify the submitted records.

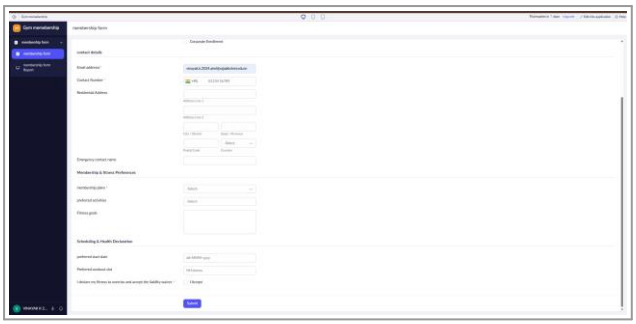

9 Filter the records based on Membership Plan and Preferred Activities for front-desk management.

Result

The **Membership Enrollment Form** was successfully created in **Zoho Creator** with a structured data model, appropriate validations, and organized sections. Member records were successfully submitted and displayed in the **Membership_Enrollment_Report**, with Deluge-based validation and automated email confirmation enabling efficient and accurate enrollment management.
